## Temporary Chain Link Fence

Temporary Chain Link Fence, also known as portable chain link fence or chain link construction fence, is a kind of free-standing chain link fence with movable feet. It can be installed directly in a variety of grounds including sand, soil, asphalt and concrete without digging holes or removing excavated materials, which saves both time and labor. It is widely used to protect your property and prevent unauthorized persons from entering. Typically, temporary chain link fence is commonly seen in construction sites, residential sites, schools, major public events including sports, concerts, gatherings, swimming pools and traffic & crowd controls.

## DESCRIPTION

**A Height:** 1800 mm, 2400 mm

**B Width:** 2400 mm, 3000 mm, 3700 mm, 4300 mm

**C Wire Diameter:** 2.5 mm, 3.0 mm, 3.5 mm,  
3.8 mm, 4.0 mm, 5.0 mm

**D Mesh Opening:** 50 mm × 50 mm, 57 mm × 57 mm,  
60 mm × 60 mm, 70 mm × 70 mm

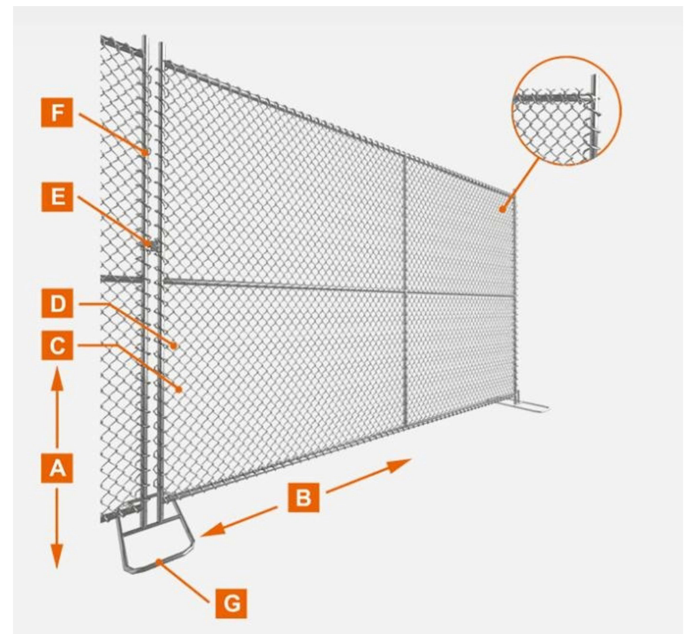

**E Clamp:** metal clip

**F Frame:**

Round pipe (outside diameter 32 mm, 38 mm, 40 mm)

**G Base:**

915 mm × 350 mm × 200 mm, 760 mm × 460 mm × 200 mm

## FEATURES

Chain link fencing (also called chain link fence or wire mesh fence) is widely used in construction sites, road construction, temporary isolation, and enclosure. It has the following characteristics:

### ✔ Easy Installation

Chain link fencing adopts a modular design, typically consisting of prefabricated mesh panels and support posts, allowing for quick installation and dismantling. Its flexibility makes it suitable for environments requiring temporary enclosure.

### ✔ Strong Protection

Due to its uniform mesh size and sturdy material, chain link fencing offers good protection. It effectively prevents unauthorized personnel from entering the construction area, ensuring construction safety and site management.

### ✔ High Durability

Chain link fencing is generally galvanized or plastic-coated, providing excellent corrosion resistance and weather resistance, maintaining a long service life even in harsh outdoor environments.

### ✔ Reusable

Due to its simple structure and robust materials, chain link fencing can be reused multiple times, making it suitable for short-term or long-term construction projects.

### ✔ Good Transparency

Compared to traditional solid fences, chain link fences have larger mesh openings, offering better visibility and allowing for easy remote monitoring of construction progress without completely obstructing the view.

### ✔ High Adaptability

This type of fence adapts to various terrains and can be used on different types of construction sites, even on uneven ground.

### ✔ Aesthetics

Chain link fences have a neat and simple appearance, blending seamlessly with the surrounding environment without creating a jarring effect, making them suitable for temporary fencing in urban areas and residential areas.

### ✔ Relatively Economical Price

Compared to other types of temporary fences (such as concrete fences and steel plate fences), chain link fences offer lower costs and better value. These characteristics make chain link fences a popular fencing choice, especially in locations requiring temporary fencing or isolation.
