Horse Walkers

horse walker . It's a device used to help exercise horses, especially when they can't be ridden or for warm-up and cool-down routines. These machines are often used in equestrian training to provide horses with a controlled environment where they can walk, trot, or canter in circles.

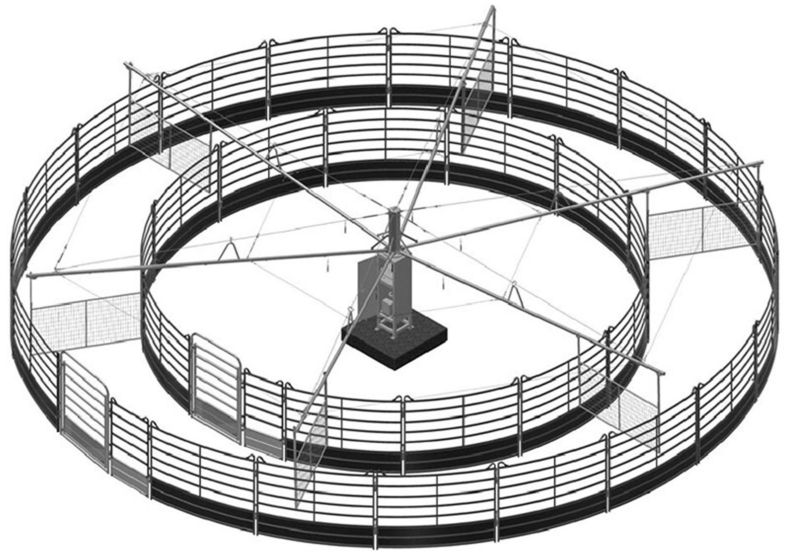

DESCRIPTION

Panel Walker for horses by TAILONG. Available in 4 horse (42 ft diameter), 6 horse (52 ft diameter or 72 ft diameter), 8 horse with 72 ft diameter inner and outer panels. Our panels can be ordered with horizontal rails or 2" x2" heavy-duty, 4 gauge wire mesh tops.

- Planetary Gearbox Never worry about burning belts again. TAILONG Walkers run on a planetary gear box system similar to those used in heavy earth moving equipment like track hoes. This provides years of virtually maintenance free, reliable operations.
- Whisper Quiet Operation
- 3 Horsepower Siemens Motor
- Variable Speed Adjustment
- Operates in Forward or Reverse
- Heavy Duty/Electrical Divider Panels
- Adjustable Divider Panel Height
- Standard Push Button Control Box or Optional Programmable Touchscreen
- Wireless Remote Control, Emergency Shutoff. Bring your horses from a slow walk to a fast trot with variable speed controls, reverse direction, or even stop the walker all from your front porch using our convenient pocket-sized remote control.
- Architectural Grade Powder Coat Finish

The Panel Walker eliminates the need to tie your horses to the walker so they are able to move about more freely. Horses that have never been in a walker have become trained to use the walker within minutes. With low impedance electrically charged, free swinging divider panels horses that lag behind are encourage to keep pace. Each divider panel is made of heavy duty 2" x2" 4 gauge wire mesh and the electrical charge is optionally activated at the control box. Panels can be ordered with the horizontal rails or wire mesh for the budget minded. Horse Safe Premiere Panels feature J legs for stability, fish hooks eliminate leg traps, chain connectors for easy hook up. Diameter 4 horse 42ft, 6 horse 52 ft or 72 ft, 8 horse 72 ft.

Another great feature of the TAILONG Panel Walker is the walker round pen. Take a closer and our panels are curved for the specific diameter required. This creates a perfect circle for the walker to operate within. Each curved panel is a full 6' tall and made of heavy duty 16 gauge 2" diameter tubing. There are no sharp edges, misplaced connectors or places for an animal to hang up. Solid bottom sheeting keeps the dirt in the tack and eliminates leg traps as well. The inner and outer round pens feature a convenient gate with sliding latch and a 9 ft alley way for horses to move in.

Both the Solid Bottom Panel and the Premier Curved Panels can also be purchased for use as a standard round pen.

Optional: Sprinkler System – enhances the drag’s effectiveness and keeps the ground moist to eliminate dust. Just attach any outdoor water hose to the walkers sprinkler hookup and you are ready to go.

Optional: Leveling Drag

Optional: Control Box Pedestal for housing your control if located out in weather

Additional information:

Weight: 2000 lbs

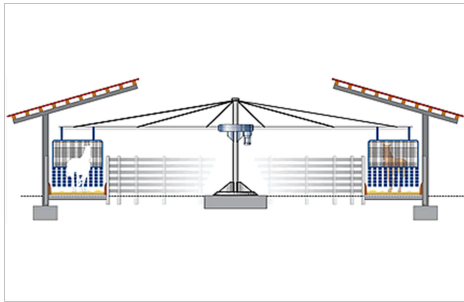

Walker Options: 4 Horse, 6 Horse, 8 Horse

Diameter: 42ft Diameter, 52ft Diameter, 72ft Diameter

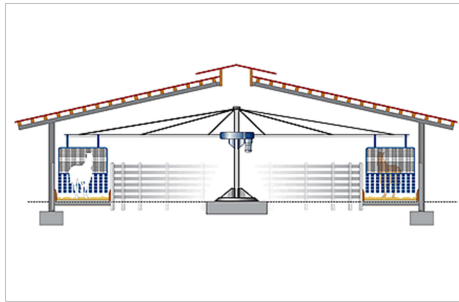

Panel Style: Standard Rail, Wire Mesh

Operation: Push Button, Programmable

FEATURES

FEATURES

✔ Exercise and Fitness

Consistent Workouts: Horse exercisers provide a steady and controlled way to exercise horses. This is particularly useful when you need to ensure the horse gets adequate exercise without a rider.

Warm-up & Cool-down: They help warm up or cool down horses before and after more intense activities like training sessions or competitions.

Fitness & Conditioning: Especially in the off-season or when the horse is recovering from an injury, a horse exerciser can maintain the horse's physical condition without overstraining it.

✔ Rehabilitation

Gentle Movement: After an injury or surgery, a horse exerciser offers a low-impact way to help a horse regain strength and mobility. It allows the horse to move in a controlled and gentle manner, preventing the risk of re-injury.

Slow and Controlled Progression: Many horse exercisers have adjustable speeds, which can be gradually increased as the horse's condition improves.

✔ Training and Behavior

Training Consistency: For horses in training, especially young ones, using an exerciser can help them get accustomed to moving in circles or around an arena, helping with balance and coordination.

Behavioral Control: Some horses may exhibit behavioral problems, such as restlessness or anxiety. A regular exercise routine in a horse walker can help alleviate some of this tension by providing a consistent outlet for energy.

Reinforcing Gait and Posture: Trainers use the exerciser to improve or refine a horse's gait, posture, and overall movement.

✔ Time and Labor Efficiency

Multiple Horses at Once: Horse exercisers are often designed to handle multiple horses simultaneously. This allows trainers and handlers to exercise several horses in a single session, making it highly efficient, especially in large equestrian facilities or racing yards.

Reduced Handler Fatigue: Instead of walking or jogging alongside each horse for a workout, the machine does the physical work, saving time and reducing the risk of fatigue or injury for handlers.

✔ Safety and Control

Controlled Environment: The horse exerciser provides a safe and controlled environment where the horse can move without risk of injury from unexpected obstacles or other animals.

Minimized Risk of Injury: Since the horse is confined to a circular track, the risk of accidents, such as a horse running off or colliding with something, is minimized.

Mental Stimulation: Horses can get bored from lack of activity, leading to behavioral issues. Using a horse exerciser can keep them mentally and physically engaged.

✔ Maintenance of Horses in Stables

Preventing Stall Restlessness: Horses that are kept in stalls for long periods without sufficient exercise can become restless, which may lead to unwanted behaviors like cribbing, pawing, or excessive movement. Using a horse exerciser regularly helps alleviate this issue.

For Pregnant or Lactating Mares: Exercising pregnant or lactating mares helps keep them healthy without the need for strenuous physical activities. A horse walker provides a gentle but effective way to keep them fit during pregnancy.

✔ Performance Enhancement (Racing and Competition)

Pre-Race Conditioning: In competitive settings like horse racing or show jumping, using a horse exerciser helps the horse get in shape, build stamina, and maintain consistent performance.

Endurance and Speed Training: A horse exerciser can help improve the horse's endurance by gradually increasing its exercise duration or speed, essential for performance in competitive disciplines.

✔ Convenience for Large Facilities

Space-saving: In busy stables with limited space, using a horse exerciser can be an effective way to keep horses active without needing large outdoor paddocks or arenas.

Available in All Weather: Exercising horses outdoors can be limited by bad weather, but a horse exerciser can be used indoors or in sheltered areas, making it a reliable solution year-round.
